SUMMARY

Innovative Computer Science graduate and MCA student with hands-on experience in full-stack development, IoT, and AI-integrated systems. Proficient in Java, Python, TypeScript, React, Node.js, and Docker/Kubernetes. Specializes in designing and automating applications, including real-time IoT platforms and scalable REST APIs. Seeking Software Engineer or DevOps role to tackle complex engineering challenges and deliver impactful solutions.

EDUCATION

Goa Business School, Goa University <i>Master of Computer Applications (Computer Science); CGPA: 8.8</i>	Goa, India <i>Expected May 2027</i>
St. Xavier's College <i>B.Sc. Computer Science; CGPA: 9.16 / 10</i>	Mapusa, India <i>Jan. 2025</i>

EXPERIENCE

Backend Developer <i>Hackathon</i> - Architected RESTful APIs for seamless integration with front-end applications, improving user experience and application efficiency - Engineered and tested backend functionalities in TypeScript and Node.js, enhancing system performance and reliability - Designed normalized database schemas and table structures for production web applications - Integrated robust security protocols and data protection measures, safeguarding user information and ensuring compliance with data protection regulations	Jan. 2026 <i>Panjim, India</i>
--	-----------------------------------

PROJECTS

Devanagari Handwritten Character Recognition <i>Python, TensorFlow/Keras, CNN, Gradio</i> - Developed a CNN classifier for 46-class Devanagari character recognition on the UCI dataset with a Gradio interface - Improved model confidence from 11% to 46% through Otsu thresholding, contour-based cropping, and preprocessing tuning
LIMA Terminal Text Editor <i>C, Systems Programming, Gap Buffer</i> - Built a raw-mode terminal text editor in C using a Gap Buffer data structure for O(1) insert/delete operations - Implemented low-level keystroke handling for navigation, backspace, and escape-to-save workflows
BloodSync & SchoolWay <i>Full-Stack, Android, PostgreSQL</i> - Designed a normalized-schema blood bank management system with real-time inventory tracking and secure authentication - Built a native Android app for real-time school bus GPS tracking with a parent admin monitoring interface
Gmail Monitor Bot <i>Google Apps Script, Gemini API, Telegram Bot API</i> Automated email summarization and Telegram delivery using a polling architecture to bypass Apps Script webhook limits

CERTIFICATIONS

Model Context Protocol (MCP) Developer, Anthropic Academy
Cybersecurity Fundamentals, IBM

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, C++, SQL
Frontend: React.js, Next.js, React Native (Expo), Vite, HTML5, CSS3
Backend & Databases: Node.js, API Development, PostgreSQL, MongoDB, MySQL, Firebase Firestore
DevOps & Tools: Docker, Kubernetes, Git, GitHub, Cloud Computing, N8n
Concepts: Machine Learning, OOPs, DSA, Event-driven Architecture
